

USER GUIDE

How to Edit Your Portfolio

A complete, step-by-step guide to updating your name, photo, projects, experience, education, and every other section of your website — no coding knowledge required.

01 The One File You'll Use for Almost Everything

Your entire website's content lives in a single file:

```
js/portfolioData.js
```

You will **not** need to touch the HTML or CSS files for normal updates. Every task in this guide happens inside `portfolioData.js`.

How to open it

1. Find the file in your project folder: `js` → `portfolioData.js`.
2. Open it with a text editor. **VS Code** (free, from code.visualstudio.com) is the easiest option — right-click the file → "Open with VS Code."
3. Notepad also works in a pinch, but VS Code will color-code the text and warn you about mistakes, which makes editing much safer.

How to save and preview your changes

1. Make your edit.
2. Save the file (**Ctrl+S** on Windows, **Cmd+S** on Mac).
3. Open `index.html` in your browser (double-click it), or refresh the tab if it's already open.
4. Your change appears immediately — there is no "build" or "publish" step for local viewing.

02 The Golden Rules

Read this once — it saves you headaches. The file is written in a format where every piece of text sits between quote marks, and every line ends with a comma (except the last item in a group). Three rules keep you safe:

Rule	Example
Only change text between the quote marks	<code>title: "Robotics Intern"</code> → <code>title: "Junior Engineer"</code>
Never delete a comma or curly brace unless you know why	Deleting one by accident is the #1 cause of a blank/broken page
Never type a straight quote mark inside your own text	Use <code>'</code> instead, e.g. <code>"Designed a 'smart' gripper"</code>

If something breaks

Press Ctrl+Z (Cmd+Z on Mac) to undo, save again, and refresh. If you're using Git, you can also run `git checkout -- js/portfolioData.js` to reset the file to its last saved version.

03 Change Your Name, Title, and Contact Info

Find the `personal:` block near the top of the file. Change only the text inside the quotes:

```
personal: {
  fullName: "ANDREYAS",           // Your full name (shown big in the hero)
  brandName: "Andreyas",         // Short name used in the nav bar/logo
  brandSubtext: "MECHATRONICS & TECH VENTURES", // Small tagline under your brand name
  title: "Final-Year Mechatronics & Control Engineering Student",
  tagline: "Bridging the gap between software intelligence...",
  location: "Lahore, Punjab, Pakistan",
  locationShort: "Lahore, Pakistan",
  statusText: "Available for Hire", // e.g. "Open to Internships"
  email: "eng.andreyas@gmail.com",
  phone: "+92 326 6876694",
  whatsapp: "https://wa.me/923266876694", // international format, no + or spaces
```

Updating your WhatsApp link

Replace the digits after `wa.me/` with your number in international format (country code + number, no `+`, no spaces, no dashes). Example: `https://wa.me/923001234567`.

04 Change Your Social Links

Still inside `personal:`, find the `socials:` block:

```
socials: {  
  github: "https://github.com/andreyas-dev",  
  linkedin: "https://www.linkedin.com/in/eng-andreyas/",  
  whatsapp: "https://wa.me/923266876694",  
  email: "mailto:eng.andreyas@gmail.com",  
  locationMap: "https://maps.google.com/?q=Lahore,Punjab,Pakistan"  
}
```

Replace each link with your own profile URL. Keep `mailto:` before your email address — that's what makes it open the user's email app instead of a webpage.

05 Change Your Resume Link

Find `resumeUrl` inside `personal:`. Follow these steps to link a resume hosted on Google Drive:

1. Upload your resume PDF to Google Drive.
2. Right-click it → **Share** → change access to **"Anyone with the link"** → set role to **Viewer**.
3. Click **Copy link**. It should look like: `https://drive.google.com/file/d/YOUR_FILE_ID/view?usp=sharing`
4. Paste that full link as the value of `resumeUrl`:

```
resumeUrl: "https://drive.google.com/file/d/YOUR_FILE_ID/view?usp=sharing",
```

The site automatically formats Google Drive links correctly — just paste the sharing link as-is.

06 Change Your Profile Photo or Logo

1. Save your new image inside the `assets` folder (e.g. `assets/profile.jpeg`).
2. Recommended sizes:

Image	Shape	Suggested Size	Keep It Under
Profile photo	Square-ish (1:1)	800 × 800 px	300 KB
Logo	Square (1:1)	400 × 400 px	100 KB

1. In `personal:`, point to the file:

```
logoImg: "./assets/tech_logo.svg",
profileImg: "./assets/profile.jpeg",
```

File names matter

If you rename your file, update the path here to match exactly — including the file extension (`.jpg` vs `.jpeg` vs `.png` matters).

07 Edit the "About Me" Section

Find the `about:` block:

```
about: {
  paragraphs: [
    "I am a passionate Mechatronics Engineering student...",
    "With hands-on experience in CAD modeling, PCB design..."
  ],
  highlights: [
    { icon: "map-pin", text: "Based in Lahore, Punjab, Pakistan" },
    { icon: "check-circle", text: "Robotics & Automation Specialist" }
  ]
}
```

- **To edit a paragraph:** replace the text between its quote marks.
- **To add a new paragraph:** copy an existing line (including the comma), paste it below, and change the text.
- **To add a highlight bullet:** copy an existing `{ icon: ..., text: ... }` line and edit the `text`. Keep the same `icon` name, or pick another from the icon list in Section 13.

08 Add or Edit Skills

Find the `skills:` block. It's a list of categories, each with its own tags:

```
{  
  category: "Programming Languages",  
  icon: "code",  
  tags: ["C / C++", "Python", "MATLAB", "JavaScript"]  
}
```

- **To add a skill to an existing category:** add another item inside the `tags: [ ]` list, separated by a comma: `tags: ["C / C++", "Python", "Rust"]`.
- **To add a whole new category:** copy one entire `{ category: ..., icon: ..., tags: [...] }` block (including its surrounding braces and the comma after it), paste it before the closing `]` of the `skills:` list, then edit the category name, icon, and tags.

09 Add a New Project

Most Common Task

Projects live inside the `projects:` list, near the bottom of the file. Each project is one block wrapped in braces.

Steps

1. Scroll to the **last project** in the list (currently `proj-3`).
2. Copy the **entire block** from its opening `{` to its closing `}`, including the comma right after it.
3. Paste it directly below, before the final `]` that closes the whole `projects:` list.
4. Give it a unique `id`, like `"proj-4"`.
5. Fill in your own details in each field.

Template to Fill In

```
{
  id: "proj-4",
  visible: true,
  featured: true,
  title: "Your Project Name",
  category: "e.g. Robotics & AI",
  shortDescription: "One or two sentences summarizing the project.",
  description: "A slightly longer version of the summary.",
  problemStatement: "What problem were you solving?",
  engineeringApproach: "How did you approach solving it?",
  mechanicalDesign: "Any mechanical/CAD design details.",
  electronics: "Any circuits, microcontrollers, or sensors used.",
  software: "Any code, algorithms, or software stack used.",
  components: ["Part 1", "Part 2", "Part 3"],
  tools: ["Tool 1", "Tool 2", "Tool 3"],
  challenges: "What was hard, and how did you solve it?",
  results: "What was the outcome? Use numbers if you can.",
  media: {
    thumbnail: "./assets/projects/my-image.jpg",
    heroImage: "./assets/projects/my-image.jpg",
    videoDemo: "https://www.youtube.com/watch?v=YOUR_VIDEO_ID"
  },
  links: {
    github: "https://github.com/your-username/your-repo",
    demo: "https://www.youtube.com/watch?v=YOUR_VIDEO_ID",
    docs: "https://drive.google.com/file/d/YOUR_FILE_ID/view?usp=sharing"
  }
}
```

Images: Save project photos inside `assets/projects/` and point to them with `./assets/projects/filename.jpg`. You can also use a direct image URL from the web instead of a local file.

No video or docs yet? Leave the value as an empty string `""` or `"#"` — don't delete the line.

To temporarily hide a project (without deleting it)

Change `visible: true` to `visible: false` on that project. It disappears from the site instantly but stays saved in the file for later.

To delete a project permanently

Delete the entire block, from its opening `{` to its closing `}` (and the comma after it).

10 Add Work Experience

Find the `experience:` block:

```
{
  title: "Robotics Intern",
  organization: "TechNova Automation",
  period: "2023 - Present",
  description: "Developed ROS2 navigation stacks for AGVs.",
  docLink: "#",
  docLabel: "VIEW INTERNSHIP CERTIFICATE"
}
```

To add a new entry: copy one full block (including the braces and trailing comma), paste it above or below an existing one, and edit the fields:

Field	Description
<code>title</code>	Your job/internship title
<code>organization</code>	Company or lab name
<code>period</code>	e.g. "Jan 2024 - Present"
<code>description</code>	What you did, in one or two sentences
<code>docLink</code>	Link to a certificate/letter (Google Drive works, same as Section 5). Use "#" if you don't have one yet.
<code>docLabel</code>	The button text, e.g. "VIEW OFFER LETTER"

Most recent experience should go **first** in the list.

11 Add Education

Find the `education:` block:

```
{
  degree: "B.Sc. Mechatronics Engineering",
  institution: "Global Tech University",
  period: "2020 - 2024",
  description: "GPA: 3.8/4.0. Capstone: Autonomous Search and Rescue Drone."
}
```

Copy an existing block, paste it, and edit `degree`, `institution`, `period`, and `description`. Most recent education should go first.

12 Add Certifications and Awards

Find the `credentials:` block — it has two separate lists, `certifications:` and `awards:`:

```
{
  title: "Machine Learning (Stanford)",
  description: "Comprehensive study of ML algorithms, neural networks, and deep learning.",
  link: "#",
  linkLabel: "View Certificate"
}
```

Copy a block within the correct list (`certifications` for courses/credentials, `awards` for competitions/leadership/recognitions), paste it, and edit `title`, `description`, `link`, and `linkLabel`.

13 Add a Research Interest

Find the `research:` block:

```
{  
  icon: "network",  
  title: "Swarm Robotics & Multi-Agent Systems",  
  description: "Investigating decentralized control algorithms for drone swarms...",  
  link: "#",  
  linkLabel: "View Publications"  
}
```

Copy a block, paste it, and edit the fields. For `icon`, reuse one of the existing values already in the file (`network` , `cpu` , `hexagon` , `bot` , `brain` , `wrench` , `code` , `activity`) — these map to the icon set already installed on the site, so sticking to these names guarantees it displays correctly.

14 Show or Hide Entire Sections

Near the very top of the file, find `sectionToggles:`

```
sectionToggles: {  
  skills: true,  
  process: true,  
  projects: true,  
  experience: true,  
  education: true,  
  credentials: true,  
  research: true  
}
```

Set any of these to `false` to hide that whole section (and its link in the navigation bar) — for example, if you don't have research to show yet:

```
research: false,
```

Set it back to `true` any time to bring it back.

15 Quick Reference — What to Copy for Each Task

I want to...	Go to this block	Copy a full entry from
Add a project	<code>projects:</code>	Section 9
Add a job/internship	<code>experience:</code>	Section 10
Add a degree	<code>education:</code>	Section 11
Add a certificate	<code>credentials.certifications:</code>	Section 12
Add an award	<code>credentials.awards:</code>	Section 12
Add a research area	<code>research:</code>	Section 13
Add a skill category	<code>skills:</code>	Section 8

The pattern is always the same

Find the list (marked by `[ ]`), copy one complete existing entry (marked by `{ }`), paste it as a new item in the list, then edit the text inside the quotes.

16 Common Mistakes and How to Fix Them

Problem	Cause	Fix
Page goes blank after saving	A missing comma or bracket	Undo (Ctrl+Z) and redo the edit more carefully, or compare against this guide's templates
Quote marks inside your text broke the layout	You used a straight quote inside a sentence	Replace the inner quote with an apostrophe <code>'</code>
An image doesn't show up	Wrong file name, wrong folder, or wrong capitalization	Double-check the exact file name and extension in <code>assets/</code> — <code>.jpg</code> and <code>.JPG</code> are treated as different files
A section disappeared	It was set to <code>false</code> in <code>sectionToggles</code>	Set it back to <code>true</code>
A project won't show	<code>visible</code> is set to <code>false</code>	Change it to <code>true</code>

Safety net

Before making a big batch of edits, copy the whole `portfolioData.js` file and save it somewhere as a backup (e.g. `portfolioData-backup.js`). If anything goes wrong, you can copy the content back.

17 Publishing Your Changes Live

If your site is already hosted (GitHub Pages, Vercel, Netlify, etc.), after saving your edits:

1. Save `portfolioData.js`.
2. Upload/commit the changed file to wherever your site is hosted.
3. Refresh your live site — changes usually appear within a minute.

If you're not sure how your site is hosted, check with whoever set up the deployment, or ask for a walkthrough of your specific hosting platform.

That's the whole workflow. Every task on this site — from changing your name to adding your tenth project — follows the same pattern: find the right block, copy an existing entry, edit the text between the quotes, save, and refresh.
